Training program on Cyber Security and IT Governance

Course Overview:

Cyber Security and IT Governance are essential aspects of modern-day organizations. As technology continues to advance, cyber threats and risks become more sophisticated and prevalent. Therefore, it is crucial to have a strong understanding of Cyber Security and IT Governance to mitigate risks and protect critical information assets. This training program is designed to provide participants with a comprehensive understanding of Cyber Security and IT Governance, including fundamentals, operations, management, and best practices. The program includes interactive discussions and practical exercises that enable participants to apply the concepts learned to their organizations.

Course Duration: 5 Days, 60 CPD Points for CSK members

Audience: ICT Directors/Managers, ICT Staff, Cyber-Security Professionals, information security staff, Network/System Administrators & Data Protection officers

Course schedule:

Day	Course	Outline		
		Session 1	Session 2	Session 3
One	Introduction to Cyber Security and IT Governance	Cyber Security and IT Governance Fundamentals • Definition of Cyber Security and IT Governance • Overview of key concepts and terminology • Importance of Cyber Security and IT Governance in today's digital age • Discussion: How does Cyber Security and IT Governance impact your organization?	Regulatory and Compliance Frameworks for Cyber Security and IT Governance • Overview of relevant laws, regulations, and standards • Compliance requirements for organizations (e.g., GDPR, HIPAA, PCI DSS) • Compliance frameworks (e.g., ISO 27001/2, NIST, COBIT) • Discussion: How does compliance impact Cyber Security and IT Governance in your organization?	Cyber Security Risk Management • Overview of Cyber Security risk management • Risk management frameworks and methodologies (e.g., NIST, ISO, FAIR) • Risk assessment process • Risk analysis techniques (e.g., quantitative, qualitative) • Discussion: How does your organization identify and manage Cyber Security risks?

Two	Network Security and Cryptography	Network Security Fundamentals • Network security basics (e.g., firewalls, IDS/IPS, VPNs) • Threat modeling • Types of attacks (e.g., DDoS, phishing, malware) • Countermeasures and mitigation techniques • Discussion: What are some common network security challenges faced by your organization?	Cryptography and Encryption Algorithms • Cryptography fundamentals • Encryption algorithms (e.g., AES, RSA, SHA) • Public-key and private-key cryptography • Digital signatures • Discussion: What are some use cases for cryptography and encryption in your organization?	IT Governance Frameworks and Best Practices • Overview of IT Governance • IT Governance frameworks (e.g., COBIT, ITIL, ISO 38500) • IT Governance processes (e.g., strategic alignment, value delivery, risk management) • IT Governance best practices • Discussion: How can IT Governance best practices be applied in your organization?
Three	Compliance and Security Operations	Compliance Requirements for Data Protection and Privacy • Overview of data protection and privacy laws (e.g., GDPR, CCPA) • Data privacy principles and requirements • Privacy-enhancing technologies • Discussion: How can your organization ensure compliance with data protection and privacy laws?	Security Operations Center (SOC) and Security Incident and Event Management (SIEM) • Overview of Security Operations Center (SOC) • SOC components (e.g., people, processes, technology) • Security Incident and Event Management (SIEM) • Incident response planning and management • Discussion: How can a Security Operations Center (SOC) improve incident response in your organization?	Penetration Testing and Vulnerability Assessments • Overview of penetration testing and vulnerability assessments • Types of penetration testing (e.g., black-box, white-box, gray-box) • Vulnerability assessment techniques • Reporting and remediation • Discussion: How can Penetration Testing and Vulnerability Assessments help improve Cyber Security in your organization?

Four	Cyber Security Governance and Risk Management	Cyber Security Governance • Overview of Cyber Security Governance • Cyber Security Governance frameworks (e.g., ISO 27001, NIST CSF) • Cyber Security Governance processes (e.g., strategy, risk management, incident management) • Best practices for Cyber Security Governance • Discussion: How can Cyber Security Governance help improve Cyber Security in your organization?	Cyber Security Risk Management • Overview of Cyber Security risk management • Risk management frameworks and methodologies (e.g., NIST, ISO, FAIR) • Risk assessment process • Risk analysis techniques (e.g., quantitative, qualitative) • Discussion: How does your organization identify and manage Cyber Security risks?	Cyber Security Incident Response and Disaster Recovery • Overview of Cyber Security Incident Response and Disaster Recovery • Incident response planning and management • Disaster recovery planning and management • Business continuity planning and management • Discussion: How can Cyber Security Incident Response and Disaster Recovery planning help your organization?
Five	Emerging Cyber Security and IT Governance Trends	Cloud Security and Virtualization • Overview of Cloud Security and Virtualization • Cloud Security risks and challenges • Cloud Security solutions and best practices • Virtualization Security best practices • Discussion: How does your organization ensure Cloud Security and Virtualization Security?	Emerging Cyber Security Threats • Overview of emerging Cyber Security threats • Ransomware attacks • Advanced Persistent Threats (APT) • Social Engineering attacks • Discussion: How can organizations prepare for emerging Cyber Security threats?	Future of Cyber Security and IT Governance • Emerging trends and technologies in Cyber Security and IT Governance • Cyber Security and IT Governance in a post-COVID world • Future challenges and opportunities in Cyber Security and IT Governance • Discussion: What do you see as the future of Cyber Security and IT Governance in your organization?

Computer Society of Kenya Registration Form

All workshop fees are in Kshs. and are per person.

Non-Residents:

Option I: Seminar Fee Inclusive of Course materials, Morning/Evening Teas/ Coffee, Lunches & Group Photo KSh. 70,000/= +16% VAT (CSK Members) KSh.80,000/=(Non-CSK Members) +16% VAT

Residents:

Option II: Seminar Fee Inclusive of Full Board Accommodation Kshs.135,000/=+16% VAT(CSK members) Ksh.145,000/=(Non-CSK Members) +16% VAT

Early registration recommended.

Attendee Names

We need the names of attendees prior to the workshop. You may substitute attendees if you notify us of the name changes prior to the workshop.
